

LINK

Link

The linkable linear light can be used in lighting projects of large warehouse, supermarket and shopping-mall, ect.

The fixture is composed by two parts: trunking and LED module. In the trunking there are two optional wiring grooves reserved, which can be used for dimming function expanding. The max quantity of spliced modules can be 70pcs to 220V single-phase power, while 210pcs to three-phase 380V.

The fixture is easy to assemble and disassemble. What's more, you only remove two screws in the end cap to replace the lens. So it brings much convenience for maintenance.
